

```
package basics;

public class DisplayTable {
    public static void main(String [] args) {

        if (args.length == 0) {
            System.out.println("Sorry! Number is missing!");
            return;
        }

        int n = Integer.parseInt(args[0]); // string to int

        for (int i = 1; i <= 10; i++) {
            System.out.printf("%3d * %2d = %4d\n", n, i, n * i);
        }

    }
}
```
