

```
package lib2;

import java.util.Arrays;

public class SelectPrime {

    static boolean isPrime(int v) {
        return false;
    }

    public static void main(String[] args) {
        int[] a = { 11, 22, 43, 50, 1, 89};

        Arrays.stream(a)
            .sorted()
            .filter(SelectPrime::isPrime)
            .forEach(System.out::println);
    }
}
```
