

```
package lib2;

import java.time.LocalDate;

public class GenericMethods {

    // public static void print(String[] a) {
    //     for (var e : a) {
    //         System.out.println(e);
    //     }
    // }
    //
    // public static void print(LocalDate[] a) {
    //     for(var e : a) {
    //         System.out.println(e);
    //     }
    // }

    // Generic Method
    public static <T> void printArray(T [] a) {
        for(var e : a) {
            System.out.println(e);
        }
    }

    public static void main(String[] args) {
        String s[] = new String[10];
        Course c[] = new Course[10];
        int [] i = new int[10];

        printArray(s); // T becomes String
        printArray(c); // T becomes Course
        //printArray(i);
    }
}
```
