```java
package queries;

import java.util.List;

import javax.persistence.EntityManager;
import javax.persistence.EntityManagerFactory;
import javax.persistence.Persistence;
import javax.persistence.Query;

public class NativeQueryDemo {

    public static void main(String[] args) {
        EntityManagerFactory emf = Persistence.createEntityManagerFactory("mssqlserver_pubs_query");
        EntityManager em = emf.createEntityManager();

        Query query =   em.createNativeQuery("select * from titles where ytd_sales > 10000", Title.class);
        List<Title> titles = query.getResultList();

        for(var t : titles)
            System.out.println(t.getTitle());

        em.close();
        emf.close();

    }

}
```
