```java
package manytomany;

import java.util.List;

import javax.persistence.EntityManager;
import javax.persistence.EntityManagerFactory;
import javax.persistence.Persistence;

public class ListAuthors {

    public static void main(String[] args) throws Exception {

        EntityManagerFactory emf = Persistence.createEntityManagerFactory("mssqlserver_pubs");
        EntityManager em = emf.createEntityManager();

        List<Author> authors = em.createQuery("from manytomany.Author", Author.class).getResultList();

        for (Author author : authors) {
            System.out.println(em.contains(author));
            System.out.println(author.getName());
            for (Title title : author.getTitles()) {
                System.out.println(title.getTitle().indent(5));
            }
        }

        em.close();
        emf.close();
    }
}
```
