```java
package oop2;

interface Task {
    void process();
}

class DoSomething implements Task {
    @Override
    public void process() {
        System.out.println("Doing something!!!");
    }
}
public class AnonymousDemo {

    public static void main(String[] args) {
        Task t = new DoSomething();
        t.process();

        Task t2 = new Task() {
                public void process() {
                    System.out.println("Doing something else!!!");
                }
        };

        System.out.println(t2.getClass());
        t2.process();

    }

}
```
